### Project cells1

1) Main Menu after starting Visual Studio 2008: File → New Project... → Visual Studio installed templates: Windows Forms Application  
Name: cells1 → Location: C:\temp → Create directory for solution: switch off → OK  
Form1.cs[Design] appears.

2) Delete two superfluous files: Form1.Designer.cs and Program.cs.  
You see the file names inside the Solution Explorer - cells1-Window:  
Click the plus sign in front of cells1 and the plus sign in front of Form1.cs.  
**Right-click** the branch Program.cs. A context menu opens. Click Delete. A message box appears:  
'Program.cs' will be deleted permanently. Quit with OK.  
**Right-click** the branch Form1.Designer.cs and delete this file too.

3) **Right-click** the gray window Form1. A context menu opens. Click View Code.  
You see the pre-programmed code: Form1.cs. Delete the code completely.

**Important:** Switch off the automatic format- and indent- mechanism of the code editor:

1. Main menu of Microsoft Visual Studio: Click "Tools".
2. A drop-down-menu appears. Click "Options...".
3. A dialog box appears. Click "Text Editor", then "C#".
4. A sub-tree appears "General, Tabs, Formatting". Click "Tabs".
5. Set Indenting to "None", Tab size and Indent size to "1" and switch on the option "Insert spaces".
6. In the sub-tree "General, Tabs, Formatting". Click "Formatting".
7. Switch on: "Leave open braces on same line as construct" but switch off all other check boxes.
8. Leave the dialog box with button "OK".

### Image and Buttons

Write the following code into the empty Form1.cs:

```
using System;
using System.Drawing;
using System.Windows.Forms;

public class Form1 : Form
{
    static void Main() { Application.Run( new Form1() ); }
    const Int32 xSize = 11;
    const Int32 ySize = 12;
    Byte[,] i0 = new Byte[ySize ,xSize ];
    Byte[,] c2 = new Byte[ySize ,xSize ];
    Byte[,] c0 = new Byte[ySize+1,xSize+1];
    Byte[,] c1v = new Byte[ySize ,xSize+1];
    Byte[,] c1h = new Byte[ySize+1,xSize ];
    Boolean C0, C1V, C1H, C2;
    Brush[] brush = new Brush[10];
    Int32 i, x, y, dx, dy;
    Byte threshold = 1;
    Button[] button = new Button[ySize];
}
```

```

public Form1 ()
{ BackColor = Color.White;
  Text      = "C2_C1V_C1H_C0";
  SetStyle( ControlStyles.ResizeRedraw, true );
  Width    = 800;
  Height   = 600;
  for ( i=0; i < 10; i++ )
    brush[i] = new SolidBrush( Color.FromArgb( i*25, i*25, i*25 ) );
  for ( y=0; y < ySize; y++ )
  { button[y] = new Button();
    Controls.Add( button[y] );
    button[y].BackColor = Color.Gray;
    button[y].Text = "nothing";
    button[y].Name = y.ToString();
    button[y].Click += new EventHandler( do_it );
  }
  button[0].Name = button[0].Text = "Homunculus";
  button[1].Name = "Threshold";
  button[2].Name = button[2].Text = "Noise";
  button[3].Name = button[3].Text = "Clear";
  button[4].Name = button[4].Text = "C0-Cells";
  button[5].Name = button[5].Text = "C1v-Cells";
  button[6].Name = button[6].Text = "C1h-Cells";
  button[7].Name = button[7].Text = "C2-Cells";
  button[8].Name = button[8].Text = "C1v+C1h-Cells";
  button[9].Name = button[9].Text = "All-Cells";
  button[1].Text = String.Format( "Threshold={0:#}", threshold );
}

protected override void OnPaint( PaintEventArgs e )
{ Graphics g = e.Graphics;
  Rectangle r = ClientRectangle;
  dx = r.Width / (xSize+2);
  dy = r.Height / ySize;
  for ( y=0; y < ySize; y++ )
  { button[y].Top = y*dy+1;
    button[y].Left = xSize*dx+1;
    button[y].Width = r.Width - button[y].Left - 2;
    button[y].Height = dy-2;
  }
  Brush redbrush = new SolidBrush( Color.Red );
  Pen redpen = new Pen( Color.Red, 5 );
  for ( y=0; y < ySize+1; y++ )
    for ( x=0; x < xSize+1; x++ )
      { try { g.FillRectangle( brush[i0[y,x]], x*dx, y*dy, dx, dy ); }
        catch {};
        try { if ( C2 && c2[y,x] > 0 )
            g.FillRectangle( redbrush, x*dx+dx/4, y*dy+dy/4, dx/2, dy/2 ); }
          catch {};
        try { if ( C1V && clv[y,x] > 0 )
            g.DrawLine( redpen, x*dx, y*dy+1, x*dx, (y+1)*dy-1 ); }
          catch {};
        try { if ( C1H && clh[y,x] > 0 )
            g.DrawLine( redpen, x*dx+1, y*dy, (x+1)*dx-1, y*dy ); }
          catch {};
        try { if ( C0 && c0[y,x] > 0 )
            g.FillRectangle( redbrush, x*dx-5, y*dy-5, 11, 11 ); }
          catch {};
      }
}
}

```

```

protected void do_it( object sender, System.EventArgs e )
{ switch( ((Button)sender).Name)
  { case "Homunculus"://*****
    i0 = new Byte[,] { {1,0,0,0,0,0,0,0,0,0,2},
                      {0,0,0,0,9,9,9,0,0,0,0},
                      {0,0,0,6,9,5,9,6,0,0,0},
                      {0,0,0,0,9,9,9,0,0,0,0},
                      {0,0,0,0,0,9,0,0,0,0,0},
                      {5,6,9,9,9,9,9,9,6,5},
                      {0,0,0,0,9,9,9,0,0,0,0},
                      {0,0,0,0,9,9,9,0,0,0,0},
                      {0,0,0,0,9,0,9,0,0,0,0},
                      {0,0,0,0,9,0,9,0,0,0,0},
                      {0,0,0,0,9,0,9,0,0,0,0},
                      {3,0,0,0,3,0,3,0,0,0,4} };
    C0 = C1V = C1H = C2 = false;
    break;
  }
  Invalidate();
}
}

```

Click Debug → Start Without Debugging Ctrl F5. Try out the program.  
Just the first button "Homunculus" works, all others are still dead.

## Threshold, Noise und Clear

Version2: Exit cells1.

Inside the event handler protected void do\_it(...) write the following new cases below the last break; of case "Homunculus":

```

case "Threshold"://*****
  if ( ++threshold > 9 ) threshold = 1;
  button[1].Text = "Threshold=" + threshold.ToString();
  break;
case "Noise"://*****
  Random random = new Random();
  for ( y=0; y < ySize; y++ )
    for ( x=0; x < xSize; x++ )
      { Int32 noise = random.Next() % 3 - 1;//gives -1 or 0 or +1
        noise += i0[y,x];//add former gray value
        if (noise < 0) i0[y,x] = 0;
        else if (noise > 9) i0[y,x] = 9;
        else i0[y,x] = (Byte)noise;
      }
  break;
case "Clear"://*****
  for ( y=0; y < ySize; y++ )
    for ( x=0; x < xSize; x++ ) i0[y,x] = 0;
  threshold = 1; button[1].Text = "Threshold=1";
  break;

```

Click Debug → Start Without Debugging Ctrl F5. Test the buttons:

Threshold → The text on the button will change.

Noise → Try multiple clicks.

Clear.

## C0-Cells, C1v-Cells, C1h-Cells, C1v+C1h-Cells, All-Cells

Version3: Exit programm cells1.

Inside the event handler `protected void do_it(...)` write the following new cases below the last `break;` of case "Clear":

```

case "C0-Cells"      : C0 = true; C1V = C1H = C2 = false; break;
case "C1v-Cells"    : C1V = true; C0 = C1H = C2 = false; break;
case "C1h-Cells"    : C1H = true; C0 = C1V = C2 = false; break;
case "C2-Cells"     : C2 = true; C0 = C1V = C1H = false; break;
case "C1v+C1h-Cells": C1H = C1V = true; C0 = C2 = false; break;
case "All-Cells"    : C0 = C1V = C1H = C2 = true;      break;

```

Write the following code below the last bracket

which closes the `switch-statement` (but in front of `Invalidate();`):

```

for ( y=0; y <= ySize; y++ ) //clear cells
  for ( x=0; x <= xSize; x++ )
  { try { c2 [y,x] = 0; } catch {}
    try { c1h[y,x] = 0; } catch {}
    try { c1v[y,x] = 0; } catch {}
    c0 [y,x] = 0;
  }
Byte above, below, left, right;
for ( y=0; y < ySize; y++ )
  for ( x=0; x < xSize; x++ )
  { if ( i0[y,x] >= threshold ) c2[y,x] = 1; else continue;
    try { above = i0[y-1,x ]; } catch { above = 0; }
    try { below = i0[y+1,x ]; } catch { below = 0; }
    try { left = i0[y ,x-1]; } catch { left = 0; }
    try { right = i0[y ,x+1]; } catch { right = 0; }
    if (above < threshold) {c1h[y ,x ]=c0[y ,x ]=c0[y ,x+1]=1;}
    if (below < threshold) {c1h[y+1,x ]=c0[y+1,x ]=c0[y+1,x+1]=1;}
    if (left < threshold) {c1v[y ,x ]=c0[y ,x ]=c0[y+1,x ]=1;}
    if (right < threshold) {c1v[y ,x+1]=c0[y ,x+1]=c0[y+1,x+1]=1;}
  }

```

Click Debug → Start Without Debugging Ctrl F5. Start the program cells1.

## Exercises

Important: Try to understand the last nested `for-loops` with the local variables `above`, `below`, `left`, `right`.
